MODULE: Math

Up:

Math

Infinity | NaN | isInfinite | isNaN | isFinite | FMod | FMatch |

#### ATTRIBUTE: Infinity

 $\mathrm{Up}:\ \mathrm{Math}\ \backslash$ 

REAL8 | Infinity

Return a real "infinity" value.

### ATTRIBUTE: NaN

Up: Math \

REAL8	NaN

Return a non-signalling NaN (Not a Number) value.

#### **FUNCTION**: isInfinite

Up: Math \

BOOLEAN	isInfinite
(REAL8 val)	

Return whether a real value is infinite (positive or negative).

Parameter val || The value to test.

#### **FUNCTION: isNaN**

Up: Math \

BOOLEAN	isNaN
(REAL8 val)	

Return whether a real value is a NaN (not a number) value.

Parameter val || The value to test.

#### **FUNCTION**: isFinite

Up: Math \

BOOLEAN	isFinite
(REAL8 val)	

Return whether a real value is a valid value (neither infinite not NaN).

Parameter val || The value to test.

#### **FUNCTION: FMod**

Up: Math \

REAL8	FMod
(REAL8 numer, REAL8 denom)	

Returns the floating-point remainder of numer/denom (rounded towards zero). If denom is zero, the result depends on the -fdivideByZero flag: 'zero' or unset: return zero. 'nan': return a non-signalling NaN value 'fail': throw an exception

**Parameter** numer ||| The numerator.

Parameter denom || The numerator.

#### **FUNCTION**: FMatch

Up: Math \

BOOLEAN	FMatch
(REAL8 a, REAL8 b, REAL8 epsilon=0.0)	

Returns whether two floating point values are the same, within margin of error epsilon.

Parameter a || The first value.

Parameter b || The second value.

 $\begin{tabular}{ll} \textbf{Parameter} & epsilon & ||| & The allowable margin of error. \\ \end{tabular}$
